

# Server Tasks

## Server Task Log

The task log displays a list of actions that have been performed on your server. We record tasks completed by both you and our data centre technicians. The task list is stored in your profile, and older entries are automatically replaced as new tasks are logged.

The screenshot displays a web interface for server management. At the top, there is a navigation bar with tabs for Overview, Management, Tasks (selected), Network, KVM/IP, and Infrastructure. On the right side of the navigation bar, there is a section for API LATENCY showing 260.0 ms and a REACHABLE status with a line graph. Below the navigation bar, a progress bar indicates 'Install progress: 65% (13/20) - Current step: Configuring Boot'. A Refresh button is present with a note: 'Task history loads when you open this tab or click Refresh.' The main content area is titled 'Install progress' and lists six completed tasks, each with a 'done' status and a trash icon:

- done: Checking BIOS version
- done: Checking BIOS version
- done: Running Hardware Reboot
- done: Setting up hardware raid
- done: Preparing disks for new Partitioning
- done: Cleaning Partitioning
